

Lecture 2 home work

Today's lecture is an introduction to the x86 and the PC, the platform for which you will write an operating system. The assigned book is a reference for x86 assembly programming of which you will do some. For today's lecture read chapter 4, but skim the other chapters so that you know what is in them.

No assignment You don't have to hand in anything in lecture; the labs will force you to understand the x86.
