

# Lecture 17 assignment

To help you prepare for class, you should answer the following question about the IO-lite paper, which is assigned for Wednesday. Sketch out the implementation of **IOL\_read** and **IOL\_write**. In addition, answer the question "How many buffers are there in memory after an application reads data with IOL\_read and then updates the just-read buffer using IOL\_write?"

**Assignment::** Please, hand in your implementation sketch at the beginning of lecture.
